Summary

# Importing Modules

```
import Data.Set
```

# Import Qualified

```
import qualified Data.Set  
import qualified Data.Sequence
```

# Import with Renaming

```
import Data.Sequence as Seq
```

```
import qualified Data.Sequence as Seq
```

# Explicit Import Lists

```
import Data.Set (empty, size)
```

# Data Types in Explicit Import Lists

```
import Data.Maybe (Maybe)
```

```
import Data.Maybe (Maybe (Just, Nothing) )
```

```
import Data.Maybe (Maybe (..) )
```

# Type Classes in Explicit Import Lists

```
import Control.Monad (Monad)
```

```
import Control.Monad (Monad, return)
```

# Importing Type Class Instances

- Type class instances ignore any explicit import list
- Automatically imported with the module

```
import Data.Set ()
```

# Import Hiding

```
import Data.Set hiding (empty,size)
```

```
import Prelude hiding (map)
```

Summary

# Defining Modules

```
module MyModule where
```

- File name: MyModule.hs

```
module Foo.Bar.Baz where
```

- File name: Foo/Bar/Baz.hs

# Export Lists

- Everything exported by default

```
module Foo.Bar.Baz
  ( myFunction
  , MyType
  , MyType2 (Constructor1) ) where
```

- All type class instances (defined or imported) always exported

# Exporting Parts of Another Module

- Default: imported functions and types aren't exported

```
module Foo.Bar.Baz
  (fromMyModule) where

import MyModule (fromMyModule)
```

# Exporting an Entire Module

```
module Foo.Bar.Baz  
  (module MyModule) where  
  
import MyModule
```

Creating cabal packages

Cabal Sandbox

Summary

# Cabal

- **Cabal:** format for Haskell packages
- **Hackage:** online repository of packages
- **cabal-install:** command line tool to install packages from Hackage

# Installing Packages

# Hackage

Importing Modules

Defining Modules

Installing cabal packages

Creating cabal packages

**Cabal Sandbox**

Summary

# Cabal Sandbox

- **Cabal Sandbox:** independent collection of installed packages
  - Separate sandboxes for each project
  - Sandboxes for bleeding edge Hackage packages
- **Cabal-Dev:** similar, compatible with older versions
